The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression (1) a vector comprising a promoter operably linked to the nucleic acid inhibits proliferation of a cell. Also included are: (2) a vector comprising a promoter operably linked to the nucleic acid concoding a polypeptide whose expression is inhibited by the antisense concleic acid; (2) a host cell containing the vector; (3) an isolated containing the vector; (3) an isolated concoding the polypeptide; (6) inhibited by the concoding the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for concliferation, (7) identifying a compound that influences the activity of identifying a proliferation, or that inhibite cellular proliferation or that has an activity against a biological pathway in which a proliferation-required gene or its gene product lies compound that inhibits proliferation of an operon required for organism acts; (9) manufacturing an antibiotic; (10) profiling a compound acts; (9) manufacturing an antibiotic; (10) profiling a compound acts; (11) a culture comprising strains in which the gene compound that inhibits proliferation of an occasion of an organism. The antibiotic; (10) profiling the extent to which each of the strains is present in a culture or collection of contiferation of an organism. The antisense nucleic acids are useful for cellular proliferation to isolate candidate molecules for rational contiferation and contiferation in cells other than S. aureus, S. typhimurium, required for proliferation in cells other than S. aureus, S. typhimurium, contiferation in cells other than S. aureus, S. typhimurium, contiferation in cells other than S. aureus, S. typhimurium, contiferation in cells other than S. aureus, S. typhimurium, contiferation in cells other than S. aureus, S. typhimurium, contiferation in cells other than S. aureus, S. typhimurium, contiferation in cells other than S. aureus, S. typhimurium, c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁

Also disclosed are the nucleic acid molecules encoding the proteins are antibodies that specifically bind to the proteins. The composition comprising the protein, nucleic acid or antibody is useful for the manufacture of a medicament for treating or preventing N. gonorrhoeae infection, this may be in the form of a vaccine or gene therapy. Sequences given in records ABP76736-ABP81046 represent nucleic acid molecules of the invention

ct the 6213 antisense sequences given in the specification where expression could be determined and inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid cenceding a polypeptide whose expression is inhibited by the antisense comprising a promoter operably linked to the nucleic acid cenceding a polypeptide whose expression is inhibited by the antisense comprising the vector; (3) an isolated controlled acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of identifying a gene product or that has an activity against a biological pathway considered for proliferation, or that inhibits cellular proliferation; (8) compounds activity; (11) a culture compound that inhibits product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of consideration of an organism. The antisense nucleic acids are useful for cellular proliferation to isolate candidate molecules for rational considered for proliferation in cisolate candidate molecules for rational considered for proliferation in cells other than S. aureus, S. typhimurium, required format directly from MIPO at consideration, but was obtained in electronic format directly from MIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Wang

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for
                                                                                                                                                                                                                                                                                                                                                     21-MAR-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes a new isolated nucleic acid encoding a Klebsiella pneumoniae polypeptide. Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This is the amino acid sequence of a Klebsiella pneumoniae polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New nucleic

```
cc the 6213 antisense sequences given in the specification where expression cc of the nucleic acid inhibits proliferation of a cell. Also included are: cc on comprising a promoter operably linked to the nucleic acid cencoding a polypeptide whose expression is inhibited by the antisense cc nucleic acid; (2) a host cell containing the vector; (3) an isolated contisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide or its fragment whose expression is inhibited by the cc polypeptide; (5) producing the polypeptide; (6) inhibiting cellular cc proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of identifying a gene product or that has an activity against a biological pathway cr agene on which the test compound that inhibits cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene compound's activity; (11) a culture comprising strains in which the gene compound's activity; (12) identifying the target of a compound that inhibits the gene product is overexpressed or underexpressed; (12) determining the extent compound that inhibits or collection of an organism. The target of a compound that inhibits the gene compound that inhibits the gene product is overexpressed or underexpressed; (12) determining the extent compound that inhibits the gene compound that inhibits the gene compound that inhibits the gene compound that inhibits the gene compound that inhibits the gene compound that inhibits the gene compound that inhibits the gene compound that inhibits the gene compound that inhibits the gene compound that inhibits the gene compound that inhibits the gene compound that inhibits the gene compound that inhibits the gene c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  21-MAR-2001; 2001US-00815242.

                                                                                                                                                                                                                                      The invention relates to Pseudomonas aeruginosa polypeptides and the CC polynucleotides encoding them. The sequences are useful in diagnosis and the thereby of pathological conditions, as molecular targets for diagnostics, CC prophylaxis and treatment of pathological conditions resulting from a CC for the ability to bind a P. aeruginosa nucleic acid, as components of CC effective antibacterial targets, as targets for antibacterial drugs, CC production of P. aeruginosa drugs, as templates for recombinant CC components for diagnosis and/or treatment of P. aeruginosa-caused CC infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABO67826-CC ABO84396 represent P. aeruginosa polypeptides of the invention. Note: The CC sequence data for this patent did not form part of the printed CC specification but was obtained in electronic format from USPTO at XXX

```

밁 Ś

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid nucleic acid; a polypeptide whose expression is inhibited by the antisense polypeptide or its fragment whose expression is inhibited by the antisense polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of

cc required for proliferation, or that inhibits cellular proliferation; (8) cc identifying a gene required for cellular proliferation or the biological cc pathway in which a proliferation required gene or its gene product lies cor a gene on which the test compound that inhibits proliferation of an cc compound's activity; (11) a culture comprising strains in which the gene cc product is overexpressed or underexpressed; (12) determining the extent co which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational cc drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, C. E. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this can electronic format directly from WIPO at figure data for mate directly from WIPO at figure of the printed specification, but was obtained continuation.

COFACTOR: Binds 2 zinc ions per subunit (By similarity)

PATHWAY: Pyrimidine biosynthesis; third step.

SUBUNIT: Homodimer (By similarity).

SIMILARITY: Belongs to the DHOase family. Subfamily 1.

This invention describes a novel use of a DNA sequence (I) encoding dihydro-orotase (II) to prepare plants which have increased

Claim 3; Page 28-30; 32pp; German.

Increasing the polysaccharide, especially starch, content of plants, by transforming with a sequence encoding dihydro-orotase.

WPI; 2001-202938/20. P-PSDB; AAB70773.

The invention also describes (1) a 1271 base pair DNA sequence (I) encoding potato (II), sequences that hybridize to it and its homologs (or their fragments); (2) method for preparing plants transforming plants by introducing an expression (1) in them; (3) method for promoter, signal sequence and (I), into a plant cell, callus tissue, containing the plant or protoplast; and (4) plants with increased PS content of complete plant or protoplast; and (4) plants with increased PS content of containing the DNA of (1). Expression of (II) increases the content of increased rate of starch synthesis. Typically, in potato tuber slices, addition of 10 mM orotate more than doubled the rate of starch synthesis. (I) is used to prepare plants (especially tomato, tobacco, potato, and manioc, rice, barley, oats, rye, wheat and maize) with increased to prepare plants (especially tomato, tobacco, potato, tapioca, manioc, rice, barley, oats, rye, wheat and maize) with increased
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1271 BP; 356 A; 244 C; 278 G; 393 T; 0 U; 0 Other;

The Beta vulgaris genes of the invention encode the proteins: casein kinase alpha catalytic subunit; dihydrocrotase; protein. The Beta vulgaris genes of the invention are useful for enhancing the osmotic and oxidative stress tolerance of a plant. The Beta vulgaris genes of the invention are useful for vulgaris genes are also useful for stimulating plant growth. The casein of flowering in a plant. The precess vulgaris dihydrocrotase gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 1743 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel sugar beet genes involved in stress response, useful for rendering crops resistant to stress situations like osmotic stress caused by salt, drought, cold or frost thus increasing crop yield.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 4; Fig 6; 95pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to new Proteus mirabilis polypeptides and polypuncleotides. The invention also relates to antibodies against the polypeptides, methods for producing the polypeptides, a method of generating vaccines for immunishing an individual against p. mirabilis method for evaluating a compound for the ability to bind a p. mirabilis activity. The polypeptides and polypuncleotides are useful as molecular resulting from bacterial infection, as reagents for diagnosing, preventing and treating pathological conditions bacterial diseases, as components of antibacterial vaccines, as targets for antibacterial drugs or as bio-control agents for plants. This sequence represents a proteus mirabilis polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 1071 BP;

New antisense nucleic acids, useful for identifying proteins or s for homologous nucleic acids required for cellular proliferation isolate candidate molecules for rational drug discovery programs. ő

ID NO 42220; 1766pp; English.

The invention relates to an isolated nucleic acid comprising any one of CC the 6213 antisense sequences given in the specification where expression CC of the nucleic acid inhibits proliferation of a cell. Also included are: CC encoding a polypeptide whose expression is inhibited by the nucleic acid culcic acid; (2) a host cell containing the vector; (3) an isolated CC nucleic acid; (2) a host cell containing the vector; (3) an isolated CC polypeptide or its fragment whose expression is inhibited by the antisense CC polypeptide; (3) producing the polypeptide; (6) inhibiting cellular CC proliferation, or the activity of a gene in an operon required for containing the polypeptide; (6) producing the polypeptide; (6) inhibiting cellular CC proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway CC required for proliferation, or that inhibits cellular proliferation; (8) cc identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies

cc organism acts; (9) manufacturing an antiblotic; (10) profiling a cc compound's activity; (11) a culture comprising strains in which the gene cc compound's activity; (11) a culture comprising strains in which the gene cc product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of cc strains; or (13) identifying the target of a compound that inhibits the cc proliferation of an organism. The antisense nucleic acids are useful for cidentifying proteins or screening for homologous nucleic acids required cc for cellular proliferation to isolate candidate molecules for rational cd discovery programs, or for screening homologous nucleic acids crequired for proliferation in cells other than S. aureus, S. typhimurium, C. K. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did cont form part of the printed specification, but was obtained in celectronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
